

IN THE CLAIMS:

The following is a complete listing of the claims indicating their present status.

1. (Currently Amended). A computer system for displaying health care processes comprising:

a network;

a server coupled to the network and in communication with a health care process database, the health care process database storing a plurality of health care processes, the server programmed to receive signals representative of a unique health care process and the server programmed to send in response to the signals information illustrative of the health care process;

a computer coupled to the network, the computer programmed to display an interactive user interface for selecting a health care process, communicate with the server when a user selects a health care process; receive information illustrative of the health care process from the server, decode information; and display the health care process to the user, the interactive user interface includes a graphic display of a medical facility and a graphic display of a first human body image, the user being able to select representations of inanimate objects within the graphic display of the medical facility to select health care processes related to various inanimate objects therein, the user being able to select representations of areas of the graphic display of the human body to select health care processes related to the selected representations of areas of the human body.

2. (Original). The computer system of claim 1 where the interactive user interface is a graphical interface.

3. (Cancelled).

4. (Currently Amended). The computer system of claim 2 [[3]] where the computer includes a mouse for interacting with [a] the first human body image.

5. (Original). The computer system of claim 4 where the mouse is used to move a pointer over the first human body image.

6. (Original). The computer system of claim 5 where the computer is programmed to display a menu of different health care processes when the mouse is placed over a portion of the first human body image.

7. (Original). The computer system of claim 6 where the computer is programmed to magnify a portion of the first human body image when the mouse is placed over a portion of the first human body image.

8. (Original). The computer system of claim 7 where the computer is programmed to present a second human body image when the mouse is placed over a portion of the first human body image and a button on the mouse is actuated.

9. (Original). The computer system of claim 8 where the computer is programmed to present a third human body image when the mouse is placed over a portion of the second human body image and the button on the mouse is actuated.

10. (Original). The computer system of claim 9 where the health care process contains text.

11. (Original). The computer system of claim 10 where the health care process contains text and graphical images.

12. (Original). The computer system of claim 11 where the health care process contains an audio presentation.

13. (Original). The computer system of claim 12 where the health care process contains a video presentation.

14. (Original). The computer system of claim 13 where the computer system includes a language translator for converting the health care process from a first language to a second language.

15. (Currently Amended). A computer implemented method for displaying a health care process to a user comprising:

displaying a first interactive user interface screen on a display device, the interactive user interface screen includes a graphic display of a medical facility and a graphic display of a first human body image;

in response to user selection, displaying a plurality of user interface screens enabling the user to select a health care process, the user being able to select representations of inanimate objects within the graphic display of the medical facility to select health care processes related to various inanimate objects therein, the user being able to select representations of areas of the graphic display of the human body to select health care processes related to the selected representations of areas of the human body; and

displaying the health care process selected by the user on a the display device.

16. (Currently Amended). The method of claim 15 wherein the step of displaying a plurality of user interface screens enabling a user to select a health care process includes the step of further comprising the step of displaying a health care process list.

17. (Original). The method of claim 16 where the first interactive user interface screen is a first human body image.

18. (Original). The method of claim 17 where the step of displaying a health care process list is 10 caused by user interaction with the first human body image.

19. (Original). The method of claim 18 where user interaction with the first human body image comprises the steps of using a mouse to move a pointer to an area of the first human body image.

20. (Original). The method of claim 19 where the user interaction with the human body comprises the step of actuating a button on the mouse when the pointer points to an area of the 15 first human body image.

21. (Original). The method of claim 20 further comprising the step of displaying a second human body image in response to the user interaction with the first human body image.

22. (Original). The method of claim 21 where the step of displaying the health care process on the display device includes the step of displaying a text description of the health care process.

23. (Original). The method of claim 22 where the step of displaying the health care process on the display device includes the step of playing an audio description of the health care process.

24. (Original). The method of claim 23 where the step of displaying the health care process on the display device includes the step of playing a video of the health care process.

25. (Currently Amended). A computer implemented [[The]] method of claim 24 further comprising the step of displaying a health care process to a user comprising:

displaying a first interactive user interface screen on a display device;

allowing a user to establish ~~determining~~ a user identity through interaction with the first interactive user interface screen;

establishing a location of the user when accessing the system;

comparing the user identity and the location with an access database; the access database containing a list of health care processes previously accessed by the user and/or accessed at the location;

displaying a list of health care processes to the user as a function of the list of health care processes previously accessed by the user and/or accessed at the location;

in response to user selection, displaying a plurality of user interface screens enabling the user to select a health care process from the list of health care processes; and

displaying the selected health care process to the user; and,

updating the access database with the user, the location and the selected health care process.

26. (Cancelled).

27. (Currently Amended). The method of claim [[26]] 25 ~~further comprising~~ wherein the step of displaying a list of health care processes includes the step of forming a first subset of health care processes based upon the user identity and a second subset of health care processes based upon the location.

28. (Currently Amended). The method of claim 27 further comprising the step of displaying the first subset of health care processes and the second subset of health care processes.

29. (Cancelled).

30. (Currently Amended). The method of claim [[29]] 25 further comprising the steps of

determining a date and a time when the computer implemented method was used;
and

recording₁ in the an access database₁, the date, the time and the user identity.

31. (Cancelled).

32. (Cancelled).

33. (Currently Amended). The method of claim [[32]] 25 further comprising the steps of:

determining a specific procedure retrieved by the computer implemented method;

and

recording the specific procedure retrieved in the access database.

34. (Currently Amended). The method of claim [[33]] 27 further comprising the steps of:

determining the first subset of health care processes by analyzing the access database.

35. (Currently Amended). The method of claim [[34]] 27 further comprising the steps of:

determining the second subset of health care processes by analyzing the access database.
